

My Presentation

With a good subtitle :-)

The basics

Getting started

Use Markdown to write your slides. Don't be afraid, it's really easy!

The basics

Getting started

Use Markdown to write your slides. Don't be afraid, it's really easy!

Making points

Look how you can make *some* points:

- Create slides with your favorite text editor
- Focus on your content, not the tool
- You can finally be **productive!**

There's more

Syntax highlighting

You can also add `code` to your slides:

```
<div class="impact">Some HTML code</div>
```

CSS classes

You can use shortcut syntax to apply **some style!**

...or just HTML if you prefer.

And more...

12-column grid layout

Use to the included **grid layout** classes to split content easily:

Left column

- I'm on the left
- It's neat!

Right column

- I'm on the right
- I love it!

Learn the tricks

See the [wiki](#) to learn more of what you can do with Remark.js
